

Real-time Global Threat Monitor

TheRiskTower, in partnership with VoxCroit Analytics, possess deep expertise in developing risk monitoring solutions which are tailored to your unique business environment. We use state-of-the-art technologies, such as Artificial Intelligence, to ensure highly accurate and rapid detection of threats that have the potential to disrupt any aspect of your business. Combining these methods with human intelligence, can help you prepare for, monitor and respond to any eventuality.

RADAR Application

We monitor various social media sources in the open source environment, which provide immense value in real-time tracking of key developments in our global coverage area. Social media sources serve as an early warning tool that alerts us to significant and unforeseen developments well in advance of traditional and/or other online media. Live monitoring of breaking developments through open source media by our team of analysts enables us to stay abreast of developments and inform clients about threats to their operations via our RADAR (Real-time Autonomous Data Analysis and Reporting) application. The service also includes industry-specific alerts and reputation and brand exposure monitoring. Ad hoc reports (weekly, monthly or quarterly) can be provided when a more detailed analysis of the risk landscape is required.
